

XM Satellite Radio is a respectable organization that does an outstanding job at providing a large variety of high quality music and services. XM radio is a subscriber based organization, which allows it to upgrade and provide more services and enhancements to it's members. Which is exclusive and is not provided by any other type of radio organization. As with Cable Television, the channels and services that Cable provides is done so to benefit it's subscribers and is paid for by it's subscribers. Why should XM radio be any different? I am a 2+ year subscriber to XM and could not travel without it in my vehicle. XM provides high quality non-stop music, news, weather, traffic and everything else that I would need on a long road trip. Being able to listen to the weather or traffic in a city that I'm in route to, before I arrive, is a huge benefit to me and is a feature proven to save time and frustration, especially when I am in a location where conventional radio stations signals can not be recieved. I ask that the NAB's petition 04-160 be rejected and that XM Satellite Radio be allowed to continue to provide excellent services for it's subscribers.

Thank you,

Sincerely,

Chris Stanfield
